oxytocinase activity in the brain of mice. A new two-dimensional (2D) thin layer chromatography (TLC) method was developed
to isolate glyoxylate from mouse brain and test the oxytocinase activity of the cerebral cortex. Glyoxylate was detected using
ninhydrin as a reagent in a (NH4)2SO4-EtOH-HOAc solvent system at pH 4.0 and 7.4 and at 40 and 60 degrees C. The
oxytocinase activity of mouse brain was characterized by its pH and temperature optima and inhibitory activity by the amine
inhibitors, aminopyrine and p-hydroxymercuribenzoate. These findings suggest that the mouse brain contains a
glyoxylate/oxalate oxydase similar to that of man and other animals.Tag: LG Just bought the LG 75z last week. The previous
owner had taken a lot of pictures, and there are at least a dozen of the 300 photos he took of his holiday with his family. They
have to be somewhere. I would have expected them to be on the phone, or in my Dropbox. But instead of clicking the link to my

clicking the individual photo on the Gallery showed it's full size on my PC. (I wanted to see if I could get the app to copy the th
